

Technical Bulletin #106
07/30/2009

Container fill Amounts

Pails:

Rutland packages to +/- 5% by weight and we only sell by the liquid quantity (pints, gallons, etc).

Drums:

We package drums by weight and bill for the actual weight that is shipped in LBS. We do not bill nor sell in Kg. Any conversion to Kg. is done as convenience to the customer and those amounts are estimates of the actual weights. We use the non rounded calculation of $LBS \div 2.205 = Kg.$ (348 lbs would be 157.8 Kg.) as specified in the Screen Print Foundation Measurement and Conversion Guide for Screen Printing.

A weight check of random orders will show a variance, sometimes less and sometimes more but should always be within the +/- 5% margin.

If your weight check show values out side more or less, let us know and we will either credit you or bill you for the excess.
